# Bird Control & Solar Panel Proofing Case Study

DECEMBER 2019

# About AAA Pest Control

## WHO WE ARE

---

We provide Pest Control Management solutions for both Domestic and Commercial environments.

From private residents and local authority housing associations to commercial sites and properties, we can provide short and long term solutions that are both scalable and suitable to your individual requirements.

All of our Pest Control & Management options are discrete, lawful and humane.

# What We Offer

---

## COMMERCIAL

Never noticed us? GREAT!  
That means we are doing our job.

From Farming & Agriculture to Factories and Cafe's, our commercial solutions are very popular as more and more companies require pest control contracts to be in place to meet various industry standards.

## DOMESTIC

We understand it can be quite an upsetting experience to encounter pests in your home.

Our technicians have the experience and expertise to deal with pest problems quickly and efficiently so you can go back to enjoying your home.

## WHAT PESTS?

Pests can range from rodents, crawling/flying insects to pigeons or squirrels.

Our solutions are not only thorough but are designed to help you feel at ease in your own home and safe in the knowledge everything is dealt with now and for the future.

# Case Study

## SOLAR PANEL EDGING AND PROOFING

---

Pigeons were roosting under Solar panels to gain a good view of feeding areas and to keep away from threats.

With the increase of Solar Panels being fitted to property roof tops, more and more pigeons are taking the opportunity to nest underneath creating noise issues and guano on and under the panels resulting in efficiency issues with the panel also.

### **SOLUTION**

All nesting material, guano is removed and Solar Panels cleaned. Our adjustable spike system is applied along the profile of the panel using high tack adhesive, meaning no drilling or risk of damage to the property roof tops or the solar panels.

The result is a clean finish and a low visual impact from ground level.

# AAA BIRD CONTROL SOLUTIONS

## **Bird spikes for solar panels**

The increase in popularity of solar panels, AAA have experienced a rise in inquiries for solar panel bird proofing. As pigeon mess covers the solar panel, it will reduce the output efficiency. If left the highly acidic pigeon droppings could cause further damage to the solar panel.

## **Bird Netting Control**

Controlling bird access to property and premises can be done utilising netting especially when isolating a large area. Netting will prevent unwanted pigeon and bird nesting, roosting and the inevitable build-up of guano.

## **Effective bird control with bird spikes**

Pigeon spikes offers proofing to a specific ledge or areas such as window sills, cornices or pipes. A cost-effective solution the spikes do not harm the birds. The spikes simply are deterrent to the bird to stop landing and roosting. A popular deterrent in town and city centres and also on the coast.

## **Effective bird control with bird gel**

Bird Gel keeps all birds off all structures without harm. Birds will completely desert a habitat, even one they have been using for years, once Bird Free has been applied. Bird Gel is ideal for complex structures that would be difficult to treat using traditional methods.

## **Pigeon waste Removal**

As pigeon waste usually contains health risks through its injurious diseases or flea content, AAA pre-treats the pigeon waste to reduce the risks before removal, and then treats the cleared area for further health risk reduction.
